DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: "34". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Penney.

Penney discloses skimmer face plate with a rectangularly shaped frame-like structure (12) and an upstanding flange around an outer periphery thereof, a flow diverting weir

Art Unit: 1724

for attachment to a face plate of a skimmer of a swimming pool comprising an enclosed scoop member (18) having an opening on one side to allow entry of water from the pool into the skimmer, the scoop member further includes a lower peripheral edge which carries flexible lip means for attachment to the skimmer face plate (Fig. 1), the scoop member further includes a top surface carrying slot means (88) and an elongated hose (48) removably received in the slot means, said hose adapted to extend outwardly into the pool to divert an additional surface flow of pool water into the scoop member and skimmer (col. 9, lines 33-37). Penney does not explicitly disclose a paddle received in the slot.

It is submitted hat it is conventional in the art to use a paddle to divert water into a skimmer. Accordingly it would have readily obvious for the skilled artisan to have used a paddle to divert water into the opening and that mere substitution of one known diverter for another is well within the scope of one of ordinary skill in the art. Further, it is noted there has been no showing of unobvious or unexpected results of utilizing one known diverter over another.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References are cited of interest to show the state of the art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fred Prince whose telephone number is (571) 272-
